## Features

### Club Series V

Gigging bands, mobile DJs and houses of worship have helped make the first four generations of Yamaha Club Series Speakers incredibly popular. The refinements of generation V continue this success story: larger enclosures for improved low-frequency performance, improved drivers for higher power handling, redesigned crossovers, stronger grilles, and dual Speakon® and ¼" connectors. Once again, with professional features, excellent sonic performance and great value, Club Series loudspeakers deliver premium quality night after night. Yamaha has a long history of both making and reproducing music. The Club series V loudspeakers represent the latest in our continuing effort to provide the professional features and sound quality you've come to expect and deserve. Built in the United States, these loudspeakers are designed to provide years of service, high power handling and excellent response have made Club Series loudspeakers the perfect choice for more than 16 years. Whether playing in a band, DJing, upgrading the sound system at your church or school, with an expanded lineup of over twenty models to choose from, you're sure to find the right loudspeaker. Have a look at what goes into their construction – Cabinets are constructed of high quality particleboard, chosen for its high strength and elasticity, consistent void free makeup and light weight. Another great benefit of this material is its environmental friendliness. Made from southern yellow pine, this material is both abundant and quickly renewable. Accurate CNC routing machines are used to cut every part, assuring consistency with tolerances of one ten thousandth of an inch. Skilled technicians assemble each cabinet by hand, rejecting any defects. Whether covered in durable carpet or the elastomeric spray coating, heavy steel handles and sturdy pole sockets make moving and positioning easy. The drivers, or speakers in these cabinets, are custom made by Eminence Speaker Corporation® to Yamaha's exacting tolerances. Woofers share design features like high strength curvilinear cones and Dupont Kapton™ voice coil formers. Oxygen-free copper voice coils and oversize strontium ferrite magnets are also used to provide high power handling and long life. The 15" and 18" drivers use cast aluminum frames to support the massive magnet structure, eliminate flex and help dissipate heat. The compression driver that generates the high frequency sound uses a pure titanium diaphragm. This 2" dome is one of the largest in its class, allowing for very high output and low distortion, without the aid of cooling fluids. It's mated to a 90° x 40° custom designed CD (constant directivity) horn with excellent dispersion and response. Crossover networks that divide the signal going to the woofer and compression driver are constructed with oversized coils, high voltage capacitors, and power resistors designed to provide the best possible sound quality and minimize loss. Overload protection is also included to protect the components. Connections on these loudspeakers are dual Neutrik Speakon® ¼ jacks for the highest possible strength and current capacity. Two of each connector makes it easy to "daisy chain," or add speakers.

### Comprehensive Lineup for a Variety of Applications

This comprehensive speaker lineup includes three models for front-of-house use, three models for monitoring, and three sub-woofers. The front-of-house speakers are available with 12 inch, 15 inch, or dual 15 inch woofers, giving you a range of choices to suit your needs. For monitor speakers you have a choice of 10 inch, 12 inch, or 15 inch models. The subwoofer lineup has also been expanded and enhanced: in addition to a new 15 inch model, the previous twin-driver model (15 inch x 2) has been upgraded to an 18 inch x 2 configuration for even more commanding lows.

### S Series V

Club Series V loudspeakers with the S prefix have rugged carpet covering and steel corner protectors to hold up to the rigors of transport. Heavy arced steel grilles offer protection for the woofer. Models are available for any application from small speech reinforcement to very high output dance requirements. No matter which model you choose, years of high performance sound are assured.

### An Ideal Match for EMX Series Powered Mixers or P Series Power Amplifiers

The Concert Club V series and Concert Club VC series speakers provide dual phone jacks as well as dual Speakon™ connectors for input and parallel connection. A high-performance PA system can conveniently be created simply by connecting a pair of speakers to an EMX series powered mixer using the phone jack outputs on a box-type model, or the Speakon™ connectors on a console model. When used in conjunction with P series power amplifiers and an MG series mixing console, you have the flexibility to add monitor speakers and a subwoofer to create a versatile live sound system. The YSPProcessing (Yamaha Speaker Processing) switch provided on the EMX series powered mixers and P series amplifiers enhances performance with single-woofer models (S112V, S115V, C112V(A), C115V(A), and monitor models) for even greater sonic impact.

## 65280 PMG S112V

12" high power woofer 2" titanium compression driver Integral pole socket for stand mounting Perfect for small bands

### Top-class Parts and Optimized Wood Enclosures

The Concert Club series has achieved worldwide acclaim for its superior sound and durability, becoming a standard for audio quality and reliability. Painstaking selection of parts and components, optimized wood enclosures, and a thorough reevaluation of speaker capacity have given the new Concert Club series a robust sonic presence that takes their performance to a new level. Even as your system changes and expands years down the road, you can expect the Concert Club series to deliver consistently excellent audio quality.

## 65281 PMG S115V

15" cast frame woofer 2" pure titanium diaphragm 90 x 45 degree CD horn Excellent for high-level music and vocals

### Classic Design Combines Strength and Sophistication

A classic, unpretentious design makes these speakers virtually timeless. The slightly rounded front grille enhances both style and durability. The Concert Club V series features a durable exterior with a carpeted surface, and large metal handles for improved portability. They're designed to endure the rigors of a sound reinforcement system that will be set up and taken down night after night. The Concert Club VC series features a stylish new appearance with a front grille that hides the speaker and a spray-finish exterior that can be repainted to blend in with any décor.

## 65282 PMG S215V

Dual 15" cast frame woofers 2000-watt peak power handling Tightly braced cabinet Excellent high-output performer

### Built-in Protection

As a much-requested solution to the problem of tweeter destruction that is a regrettably common occurrence in the equipment and studio rental business, the Concert Club series is provided with a protection circuit that prevents excessive tweeter input due to acoustic feedback or other causes.

## 65283 PMG SM10V

10" floor monitor 1" titanium dome compression driver 90 x 90 degree dispersion Great where size is a concern

### 1-3/8 inch speaker pole sockets

Except for the floor-type S215V/C215V models, all front-of-house and monitor models are equipped with a pole socket for use with speaker stands. You can place these speakers on a standard 1-3/8 inch diameter speaker stand for a variety of applications.

## 65284 PMG SM12V

12" 2-way floor monitor Low profile design Can easily be used as a main speaker Awesome vocal monitor

## 65285 PMG SM15V

15" 2-way floor monitor Heavy-duty cast frame woofer Very high output Ready for use with electronic music

## 65286 PMG SW115V

15" cast frame driver Long-travel for solid bass down to 35Hz Integral socket for main speaker pole Appropriate wherever more bass is required

### **65287 PMG SW118V**

18" cast frame driver Response down to 30Hz Efficient Bass reflex design Great for use with dance music

### **65288 PMG SW218V**

Dual 18" subwoofer Cast frame drivers 2400-watt peak power handling Amazing bass performance

## **C Series V**

Club V loudspeakers with the C prefix are coated with a heavy-duty elastomeric spray coating. Designed as an installation alternative to the carpeted S versions, they can easily fit any décor. The finish is very tough, and readily paintable to match surroundings. The steel grilles are foam-lined with acoustically transparent material to provide a more subdued appearance.

### **65269 PMG C112V**

12" 2-way design High-power woofer Titanium HF driver Great for vocals

### **24018 PMG C115V**

15" cast frame woofer 1000 watt peak power handling 90 x 45 degree CD horn Excellent for live and recorded music

### **65271 PMG C215V**

Two 15" cast frame woofers 2000-watt peak power handling 90 x 45 degree CD horn Perfect where high sound pressure levels are required

### **65272 PMG CM10V**

10" floor monitor 1" titanium dome compression driver Can also be used as a main speaker Great where size is a concern

### **65273 PMG CM12V**

12" 2-way floor monitor 2" titanium HF driver Rugged, low-profile design Great for vocals

### **65274 PMG CM15V**

15" 2-way floor monitor Full frequency response Pole socket allows use as a main speaker Wide frequency response

### **65275 PMG CW115V**

15" cast frame driver Efficient bass-reflex design Integral socket for main speaker mounting Solid response down to 35Hz

### **65276 PMG CW118V**

18" cast frame driver 1200 watt peak power handling Bass reflex design Great for use with dance music

### **65277 PMG CW218V**

Dual 18" subwoofer Unique folded baffle design Low-profile cabinet Capable of extreme SPL

### **65278 PMG C112VA (Flyable)**

12" hi-compliance woofer 2" titanium compression driver 12 integral fly points Bracket mount attach points Screw terminal inputs for simple installation Ready to hang right out of the box

### **65279 PMG C115VA (Flyable)**

15" cast frame woofer 2" titanium compression driver 12 integral fly points Screw terminal inputs for simple installation Ready to hang right out of the box
